REGISTRATION

Teaching Human Anatomy

S.T.A.R.S.

Students and Teachers
Anatomical Research Program

June 16–27, 2008
Application deadline April 30, 2008
for up to one credit tuition remission.

Dr. Kristen Bruzzini
Assistant Professor
Biology Department
Maryville University
650 Maryville University Drive
Saint Louis, Missouri 63141

Acceptance into this course does not confer any right to admission to any other course or program at Maryville University.

Partial tuition remission is available. Award is given on a first come first serve basis. Early application is advised. Maryville University reserves the right to cancel the course at any time.

Equal Opportunity: Maryville University does not discriminate on the basis of race, color, sex, religion, sexual orientation, national or ethnic origin, age, disability or veteran status in any student program of activity administered by the university or with regard to admission or employment.
GENERAL DESCRIPTION

This course consists of a series of lectures, dissections, and demonstrations designed to give teachers an opportunity to review basic topics in anatomy. Teachers will work in teams to design lesson plans and then implement those plans in a classroom setting. Teachers will have the opportunity to invite up to two of their students to attend the student workshop portion of this course. Human cadavers will be used to examine human anatomy regionally. Each session will begin at 9 a.m. and end at 1 p.m.

THE FACULTY

This course is taught by Dr. Kristen Bruzzini. Dr. Bruzzini is an assistant professor in the Biology Department. She is responsible for teaching Gross Anatomy and Anatomy and Physiology to undergraduate and graduate students majoring in Biology, Biomedical Sciences, Physical Therapy, Occupational Therapy, and Nursing. She holds a B.S. in Biology from Emory University and a Ph.D. in Anatomy and Cell Biology from the Uniformed Services University of the Health Sciences. Dr. Bruzzini has over 10 years experience teaching anatomy and participating in advising and teaching students in the health sciences.

COURSE SCOPE

A regional approach will be employed in this course.

Course content will include:
- an examination of the superficial and deep muscles of the back
- an examination of the shoulder and pectoral region
- an examination of the limbs
- an examination of the thorax and abdomen
- an examination of the head and brain.

Lectures on each topic will be given in the morning followed by hands-on laboratory work using models, bones, and human cadavers. A working lunch will provide teachers an opportunity to discuss lesson plans for the student-integrated portion of the course. To allow individualized instruction, the course is limited in size.

TUITION & CREDITS

Tuition for this course will be $425 per credit. Two graduate credits in Education will be awarded upon successful completion of the course. Tuition remission for up to one graduate credit is available to the first eight (8) attendees who register by April 30, 2008.

Tuition includes supplies (except lab coats), cadaver specimens, a complete syllabus covering each dissection unit, and lunch.

ADMISSION

Applications will be accepted from teachers involved in basic science courses. A basic familiarity with college-level introductory biology will be beneficial. The course will be rigorous and fast-paced over the first week. However, because it assumes no prior background in human anatomy it will not be necessary for attendees to have already had extensive experience in anatomy. As noted earlier in this pamphlet, space is limited, so early applications are encouraged. Deadline for consideration for up to one credit tuition remission is April 30, 2008*. Applications will be considered after this time until the course is filled.

To register for this course or to receive further information, please write, call or e-mail Dr. Kristin Bruzzini for permission and instructions for registering for the course. The attached application form will be required to attend the course.
